

**X**

DAILY TRAINING REPORT – DAY 3

PRESENTED BY
HUDA ANSARI

DATE
21 MAY 2026

TOPICS COVERED

Performance Metrics

Excel Conditional Formulas

Data Analysis

Presentation & Storytelling

Objectives & Performance Metrics

UNDERSTANDING OBJECTIVES

- Objectives should be clear and measurable
- Helps in tracking progress and performance
- Important for proper data analysis and reporting

PERFORMANCE METRICS

- Used to measure efficiency and results
- Metrics should always be measurable and easy to analyse

EXAMPLES

Attendance Percentage

$$= (\text{Present Days} / \text{Total Days}) * 100$$

Sales Growth

$$= (\text{This Year Sales} - \text{Last Year Sales}) / \text{Last Year Sales} * 100$$

Performance Scores

$$= (\text{Obtained Score} / \text{Total Score}) * 100$$

Excel Conditional Formulas

	FORMULA	SYNTAX / EXAMPLE	WHAT IT DOES
	IF	<code>=IF(A1>=40, "Pass", "Fail")</code>	Returns one value if the condition is TRUE and another if FALSE.
	COUNTIF	<code>=COUNTIF(A1:A10, "Present")</code>	Counts the number of cells that meet a single condition.
	COUNTIFS	<code>=COUNTIFS(A1:A10, "Present", B1:B10, "A Grade")</code>	Counts the number of cells that meet multiple conditions.
	SUMIF	<code>=SUMIF(A1:A10, "Electronics", B1:B10)</code>	Adds values in a range that meet a single condition.
	SUMIFS	<code>=SUMIFS(C1:C10, A1:A10, "East", B1:B10, "Sales")</code>	Adds values in a range that meet multiple conditions.
	AVERAGEIF	<code>=AVERAGEIF(A1:A10, "Pass", B1:B10)</code>	Calculates the average of cells that meet a single condition.
	AVERAGEIFS	<code>=AVERAGEIFS(C1:C10, A1:A10, "HR", B1:B10, ">80")</code>	Calculates the average of cells that meet multiple conditions.

USES

Data analysis

Reporting and calculations

Managing large datasets efficiently

Better insights for decision making

Presentation & Storytelling

Turning Data into Impactful Stories

KEY LEARNINGS

Presentations should explain data clearly.

Storytelling makes presentations more engaging.

Numbers should be supported with proper explanation and flow.

1. SET THE CONTEXT

Introduce the topic and the purpose.

2. PRESENT THE DATA

Show the key numbers and insights.

3. EXPLAIN THE INSIGHT

Interpret the data and share what it means.

4. CONCLUDE & IMPACT

End with key takeaways and the impact.

GOOD STORY FORMULA

BENEFITS

Better audience understanding

Improved communication skills

More impactful presentations

Stronger engagement and retention

“

Great presentations don't just show data, they tell a story that inspires action.

”
